

VID-01802/29  
12405sh

1. A method of enhancing an electronic communication, comprising the steps  
2 of:

transmitting and receiving a message or file with a content;

4 transmitting and receiving, along with the message or file, enhancement  
information enabling a recipient of the message or file to more fully appreciate the  
6 content.

2. The method of claim 1, wherein the enhancement information is stored at  
2 the location of the recipient to limit the need for retransmission thereof.

3. The method of claim 1, wherein the enhancement information enables the  
2 recipient to visualize the sender or listen to the content of a message.

4. The method of claim 1, wherein the enhancement information includes  
2 phonemes enabling the recipient to listen to the content of a message in a synthesized  
voice of the sender.
